Emergency Response Guide

For emergencies- Call 911

**Tornado/Severe Weather** - Take shelter on the lowest level of your building ● Stay away from windows, above grade exterior walls, and areas with broad-spanned roofs ● Move to an interior hallway or room and assume a safe position low to the ground ● Monitor local media, NOAA weather radio, etc. ● If outdoors and shelter is unavailable or if there is no time to get indoors, lie in a ditch or low-lying area. Protect your head with your arms.

**Medical Emergency** - Call 911 and stay on the phone for instructions on how to assist ● Send someone to meet responding emergency personnel, if possible.

**Fire** - Use a fire extinguisher only if safe to do so and you have been trained ● Activate the fire alarm if not already activated ● Evacuate the building immediately ● Do not use the elevators ● If able, help those needing assistance ● Stay low if confronted with smoke and check closed doors for heat before opening ● Call 911 ● Do not re-enter the building until authorized to do so by emergency personnel.

**Chemical Spill/Hazardous Materials Emergency** - Call 911 ● Provide information on the type of chemicals (if known), size of the spill and possible exposures ● Evacuate the immediate area and follow instructions from emergency personnel regarding additional evacuations ● The area should remain evacuated until re-entry is authorized by the appropriate authorities.

**Armed Assailant** - Call 911 ● In case of an imminent life-threatening incident, each individual should take actions necessary to protect their own life ● If possible, flee the area and avoid danger ● If evacuation is not a safe option, lock and/or barricade doors and secure yourself in a safe area, turn off the lights, and remain quiet and out of sight ● If necessary, take action to ensure survival- attempt to incapacitate the assailant by either throwing items or with physical aggression.

**Personal Crisis** - If you are in distress and think that you may harm yourself or someone else, call 911 ● If you encounter someone you think is a danger to themselves or others, call 911 ● For non-life-threatening situations, contact Counseling Services and/or the Threat Assessment Team.

**Bomb Threat** - If you receive a threat, keep calm and obtain as much information as possible: Where is the bomb? When will the bomb detonate? What kind of bomb is it? What will cause it to explode? What does it look like? Who placed the bomb? Why did they place the bomb? Name and address of the person reporting the bomb? ● Do not disconnect the line; have someone else use another phone to call 911 ● If found, do not touch or handle a suspicious package or item; move away and call 911 ● Follow evacuation instructions from emergency personnel.

How Will You Be Notified of a Campus Emergency?

Various types of emergencies could affect UI. Emergency notifications will provide the nature of the emergency and actions to take. The following are means in which emergency notifications may occur:

● The Hawk Alert notification system will be utilized when there is a severe threat to campus public health and safety that has not been contained or controlled and when immediate action is required. For additional details and to update your emergency notification information, visit police.uiowa.edu/hawk-alert.

● The Outdoor Emergency Notification System includes outdoor sirens and a public address system that may be utilized for campus-wide critical incidents, including, but not limited to, tornado warnings.

● Building notification systems that may be used to inform occupants of an emergency include NOAA weather radios, digital signage, fire alarms, and/or other building specific equipment.

**Non-Emergency Contact Numbers**
